Please do not cap toxic brew- We want to gone. Ford has had years to restore this site- we want it cleaned up once and for all time. Our surface and ground water IS affected. capping the mess will not change things and may concentrate it with out transpiration. Capping generally fails or the studies are based on incomplete information. Here in NJ we couldn't encap a simple landfill with out corruption and failure. After a brief scan of the issue on the Ford PR site, I found it funny that the study used in favor of capping was based on heavy traffic.

Truck traffic study would never be used if they were promoting energy extraction but will be an issue when remediating 40 year old toxic waste that is killing people. Please clean up Ringwood- we do not need ANOTHER SACRFICE ZONE here in NJ- we have far too many now. Thank You- Carol Jagiello
